Financial Extraction Benchmark Dataset

Ground Truth Metrics Extracted from Tax Returns & Bank Statements (FY 2024-2025) | Model Target: GPT-4o-mini

Summary KPI Overview — Consolidated 4-Entity Ground Truth

Metric / Entity	Entity A Apex Mfg Inc.	Entity B Nexus Logistics	Entity C Summit Healthcare	Entity D Vantage Retail
Gross Revenue	$4,850,200	$2,310,800	$6,120,500	$1,850,000
Total Debt	$1,250,000	$890,000	$1,150,000	$925,000
Calculated EBITDA	$820,450	$345,100	$1,180,000	$185,000
Debt / EBITDA Ratio	**1.52x**	**2.58x**	**0.97x**	**5.00x**
Risk Score (0-100)	**90.5 / 100**	**78.6 / 100**	**94.2 / 100**	**52.1 / 100**
Risk Profile Category	Prime / Low Risk	Moderate Risk	Prime / Low Risk	Elevated / High Risk

Detailed Extraction Test Items — Entity Breakdown Matrix

Metric Description	Source Document	Line Item	Entity A	Entity B	Entity C	Entity D
Gross Receipts / Sales	IRS Form (1120S/1065)	Line 1a	$4,920,000	$2,350,000	$6,200,000	$1,910,000
Returns & Allowances	IRS Form (1120S/1065)	Line 1b	$69,800	$39,200	$79,500	$60,000
Net Revenue	IRS Form (1120S/1065)	Line 1c	$4,850,200	$2,310,800	$6,120,500	$1,850,000
Officer Compensation	IRS Form / Payroll	Line 7	$210,000	$120,000	$250,000	$90,000
Depreciation & Amort.	IRS Form (1120S/1065)	Line 14	$115,300	$45,000	$180,000	$35,000
Interest Expense	IRS Form / Debt Debits	Line 13	$48,250	$23,100	$42,000	$45,000
Taxable Income / Net	IRS Form (1120S/1065)	Line 21	$446,900	$157,000	$708,000	$15,000
Short-Term Debt	Balance Sheet (L)	Line 17d	$350,000	$240,000	$250,000	$275,000
Long-Term Debt	Balance Sheet (L)	Line 19d	$900,000	$650,000	$900,000	$650,000

Reconciliation & Risk Score Calculation Methodology

EBITDA Recomputed Formula:
EBITDA = Net Taxable Income (Line 21) + Interest Expense (Line 13) + Depreciation (Line 14) + Officer Compensation (Line 7)

Entity Calculations:
• **Entity A:** $446,900 + $48,250 + $115,300 + $210,000 = **$820,450** | Debt = $1,250,000 | Leverage = **1.52x**
• **Entity B:** $157,000 + $23,100 + $45,000 + $120,000 = **$345,100** | Debt = $890,000 | Leverage = **2.58x**
• **Entity C:** $708,000 + $42,000 + $180,000 + $250,000 = **$1,180,000** | Debt = $1,150,000 | Leverage = **0.97x**
• **Entity D:** $15,000 + $45,000 + $35,000 + $90,000 = **$185,000** | Debt = $925,000 | Leverage = **5.00x**

Multi-Factor Risk Score Weighting Model (0 - 100)

Pillar Metric	Weight	Scoring Criterion
Leverage Ratio (Debt / EBITDA)	40%	< 1.5x = 95-100 | 1.5-2.5x = 80-94 | 2.5-4.0x = 60-79 | > 4.0x = < 60
Debt Service Coverage (DSCR)	30%	> 10x = 95-100 | 5-10x = 80-94 | 2-5x = 60-79 | < 2x = < 60
Profit Margin (EBITDA / Rev)	20%	> 20% = 90-100 | 15-20% = 80-89 | 10-15% = 70-79 | < 10% = < 60
Data Integrity / Variance	10%	< 1% Tax-to-Bank Variance = 95-100 | > 5% Variance = Penalized
